

14 POINT OIL HEATING INSPECTION

1. Inspect Oil Tank:

Check for signs of corrosion, leaks, or damage in the oil tank.

2. Verify Oil Levels:

Ensure there is an adequate supply of heating oil in the tank.

3. Check for Leaks:

Inspect the entire oil system for any signs of leaks.

4. Test Safety Controls:

Verify that safety controls are functioning properly.

5. Inspect the Flue Pipe:

Check the flue pipe for any obstructions or signs of damage.

6. Check Thermostat:

Ensure the thermostat is working correctly and calibrated.

7. Check the Burner:

Inspect the burner assembly for cleanliness and proper ignition.

8. Inspect the Heat Exchanger:

Check the heat exchanger for signs of corrosion, rust, or damage clean as necessary.

9. Test the Ignition System:

Ensure the ignition system is working properly.

10. Replace Nozzle:

Replace nozzle to improve system efficiency.

11. Inspect and Replace the Oil Filter:

Replace the oil filter to prevent clogs and improve system efficiency.

12. Lubricate Moving Parts:

Lubricate any moving parts, such as the blower motor and fan, to reduce friction.

13. Inspect Controls and Wiring:

Check controls, thermostats, and wiring for any signs of wear or damage.

14. Check and Adjust the Burner Combustion:

Measure and adjust the burner combustion for optimal efficiency.

Note: Some tasks may not be applicable to all accounts/equipment.
